(See Item #2 in the foregoing.) The Agreement was amended on July 7, 2009.

16. There were no changes to directors and officers of the Company in June, 2009.
17. Resource exploration and development is a speculative business, characterized by a number of significant risks including, among other things, unprofitable efforts resulting not only from the failure to discover mineral deposits but also from finding mineral deposits that, though present, are insufficient in quantity and quality to return a profit from production.

All of the claims to which the Company has a right to acquire an interest are in the exploration planning stage only and are without a known body of commercial ore. Development of the subject mineral properties would follow only if during the exploration program being conducted, sufficient favourable results are obtained. The business of exploration for minerals and mining involves a high degree of risk. Few properties that are explored are ultimately developed into producing mines.

There is no assurance that the Company's mineral exploration and development activities will result in any discoveries of commercial bodies of ore. The long-term profitability of the Corporation's operations will in part be directly related to the costs and success of its exploration programs, which may be affected by a number of factors.

In the absence of cash flow from operations, the Company will need to rely on either joint venture partners or on capital markets to fund its exploration in order to achieve its exploration targets.

As a result of the business combination with Zacoro, a new Board of Directors was appointed. There is no assurance that the Company's present business and plans to develop its current properties will be continued by the new Board.
