Chai Cha Na Receives Initial Samples from Phase I Exploration Program

Fred Fisher, President of Chai Cha Na Mining (“Chai Cha Na Mining” or the “Company”) is pleased to report positive results from a recent soil sampling survey completed on the Gold Summit Project (the “Property”), located within the prolific Bralorne/Goldbridge Mining Camp, in southwestern British Columbia. A total of 996 soil samples were collected of which 500 samples were analyzed for gold by fire assay and 34 additional elements by ICP-AES. There are 26 “gold in soil” anomalies resulting from the work ranging from 29 ppb to 392 ppb gold. These anomalies appear to extend the gold anomalies identified by previous operators. These anomalies, in conjunction with results from previous operators, form three large linear “gold in soil” anomalies striking east-west to northeast-southwest. Only a portion of the anomalous areas have been tested by previous operators by drilling and ideally should be tested by shallow drilling in the future.

Chai Cha Na currently controls a 15% interest in the Property with an option to earn a full 100% interest by making cash payments of \$210,000 of which \$80,000 has already been paid and the issuance of 2million common shares of 250,000 have been issued. The Gold Summit Property is a highly prospective early stage gold exploration property comprising three mineral claims covering approximately 1,203 hectares and is situated in the Lillooet Mining Division of British Columbia. The claims host a number of roughly east-west trending mesothermal gold-silver vein occurrences.

Paul Reynolds, P. Geo., a qualified person as defined by National Instrument 43-101, has supervised the preparation of the scientific and technical information that forms the basis for this news release. Field work at the property was conducted and supervised by Madman Mining Co. Ltd.

Forward-Looking Information:

This release may include certain statements that may be deemed "forward-looking statements". All statements in this release, other than statements of historical facts, that address future production, reserve or resource potential, exploration drilling, exploitation activities and events or developments that Hi Ho Silver Resources Inc. (the "Company") expects to occur, are forward-looking statements. Such statements are identified in this release by the use of words such as "will" and "expected" as well as the use of the future or conditional tense. Although the Company believes the expectations expressed in such forward-looking statements are based on reasonable assumptions, such statements are not guarantees of future performance and actual results or developments may differ materially from those in the forward-looking statements. Factors that could cause actual results to differ materially from those in forward looking statements include market prices, exploitation and exploration successes, and continued availability of capital and financing and general economic, market or business conditions. Investors are cautioned that any such statements are not guarantees of future performance and actual results or developments may differ materially from those projected in the forward-looking statements. The Company does not assume any obligation to update or revise its forward-looking statements, whether as a result of new information, future events or otherwise
