MONTHLY REVIEW  
JUNE 2010

## President's Message

Markets are cyclical and CNSX is no exception. 2010 has seen a rebound in trading activity from the cyclically low levels of 2009 to the extent that our trading activity and the value of trading for the first six months of this year have exceeded the totals for all of last year. This is not just due to the lack of activity in 2009 however, because the year-to-date 2010 activity exceeds four of the past six year's totals.

On June 15, 2010, the Ontario Securities Commission approved amendments to some of our rules, policies and listing forms. The principal purposes of the amendments are to:

- introduce specific listing requirements for a variety of debt securities including bonds, debentures, notes and any other securities CNSX deems to be debt securities for the purpose of listing
- reinforce the concept of full, true and plain disclosure to emphasize the principle followed by CNSX that disclosure is of pre-eminent importance
- increase the requirement for the value of the public float to \$250,000

During the month, two new companies were listed: Galliard Resources, an IPO with a mineral exploration program; and Carlisle Goldfields, a former TSX listed company with advanced exploration and development prospects. Carlisle holds several properties including three past producing mines in northern Manitoba.

# Pure Trading

The month of June saw the third consecutive monthly increase in market share for Pure Trading: increasing activity from new liquidity providers is continuing to push trading volumes higher among stocks trading for more than a dollar. For the month, the market share for TSX-listed stocks was 1.73%. As can be seen from the table below, the names making up the majority of these trades are more representative of activity in the broader market, focused on large cap index names and ETF's. Early indications are that we will continue to build on these gains through the month of July.

Many of our Canadian dealer clients implemented their business continuity plans for the week of the G8/20 meetings in June. Trading and related technical support resources were relocated to their local back up facilities, or operations shifted to offices in Montreal, Calgary and Vancouver. CNSX Market Ops operated on the Friday of the G20 meetings with its DRP plan in place: staff members within walking distance of the office were able to work from the regular office; the other half of the operations and technical support team worked from home, connected to the management systems by secure wireless VPN, and collaborated with their colleagues over an internet conference facility (Skype). Key components of the technical support service continued to be provided from our Vancouver operation throughout the week as well. Although the markets were quiet throughout the week, service levels to our clients were not impacted with the implementation of the plan. We will be following up with the industry to further refine our plans with the benefit of the experience gained over the course of the week.
